

Results:

7 test samples, 21 combinations of fingerprints. Program was run to calculate Similarity measure and find the match between each pair.

For test1m

For test1mflip

For testImfliprot

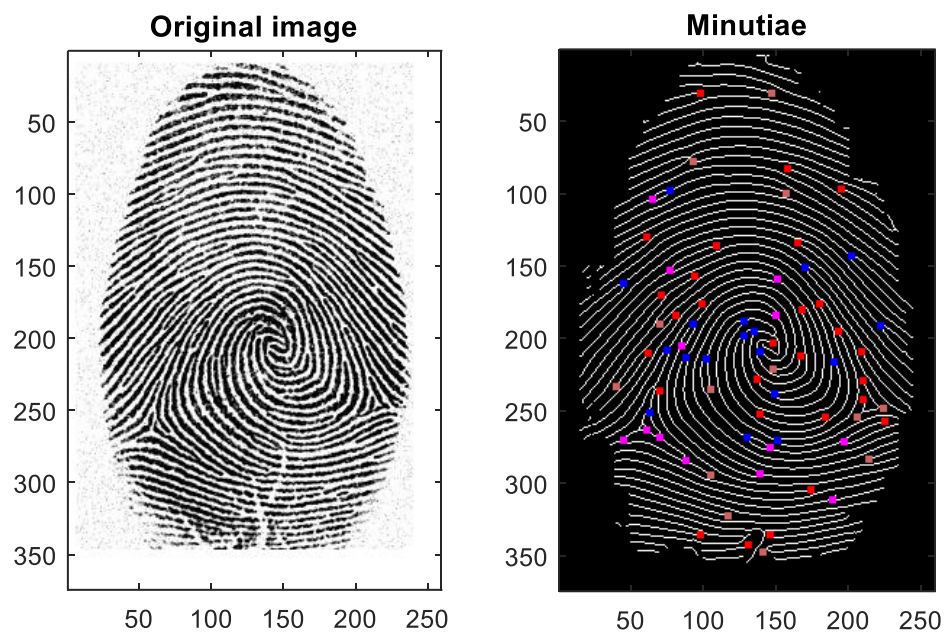

For testImfliprotSP

For testImflipSP

For testImrot

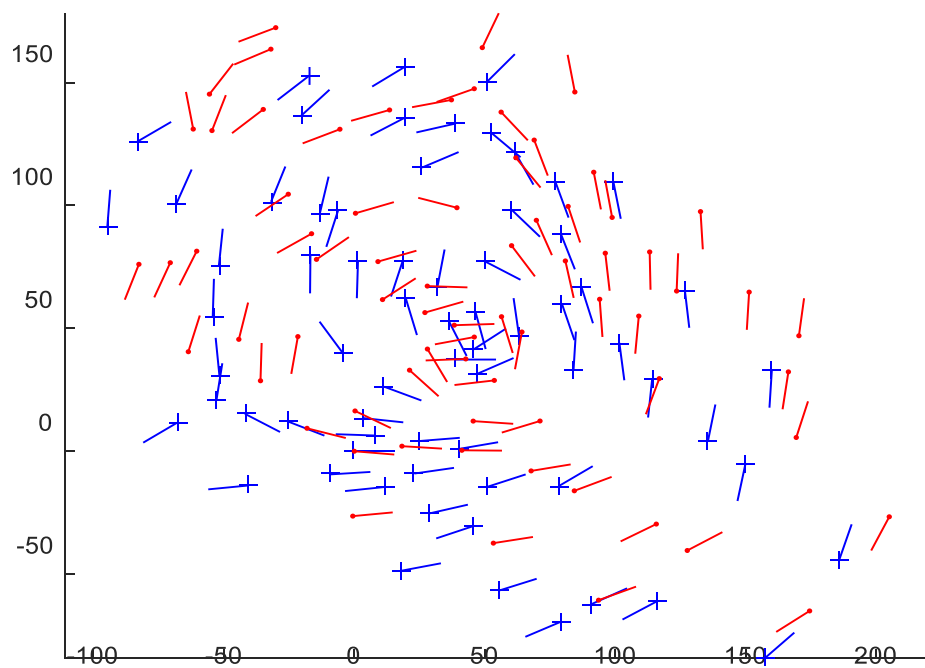

For testImSP

COMPARISON:

1. testIm vs testImflip

Similarity measure : 0.38307

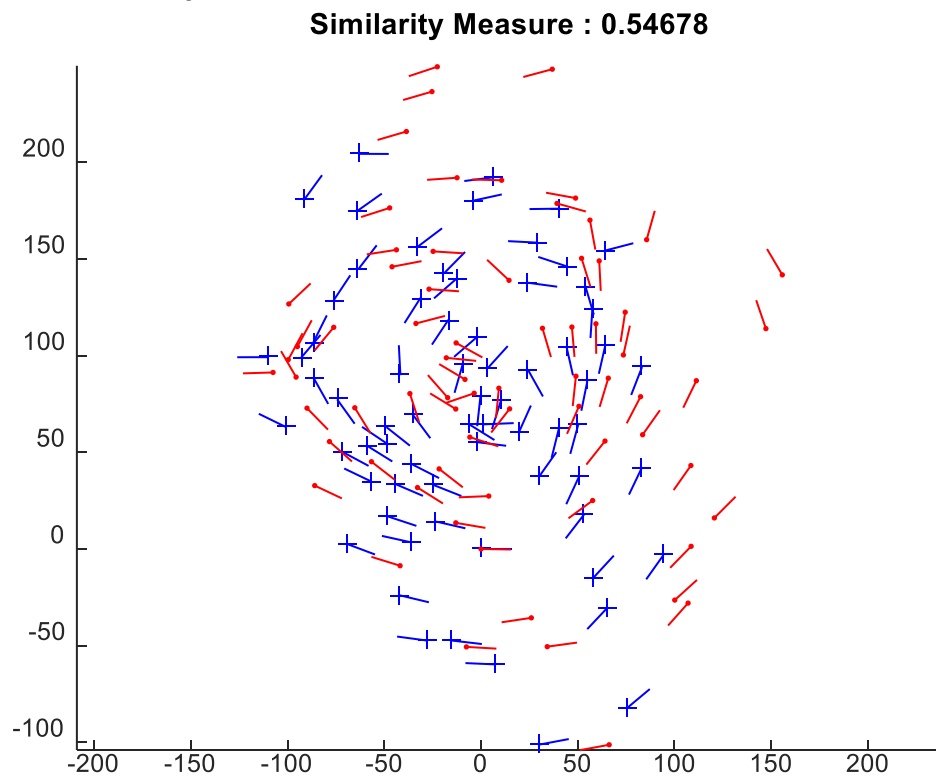

Similarity measure = 0.38307, and hence not a MATCH

2. testlm vs testlmfliprot

It's a MATCH

3. testlm vs testlmfliprotSP

It's a MATCH

4. testlm vs testlmflipSP

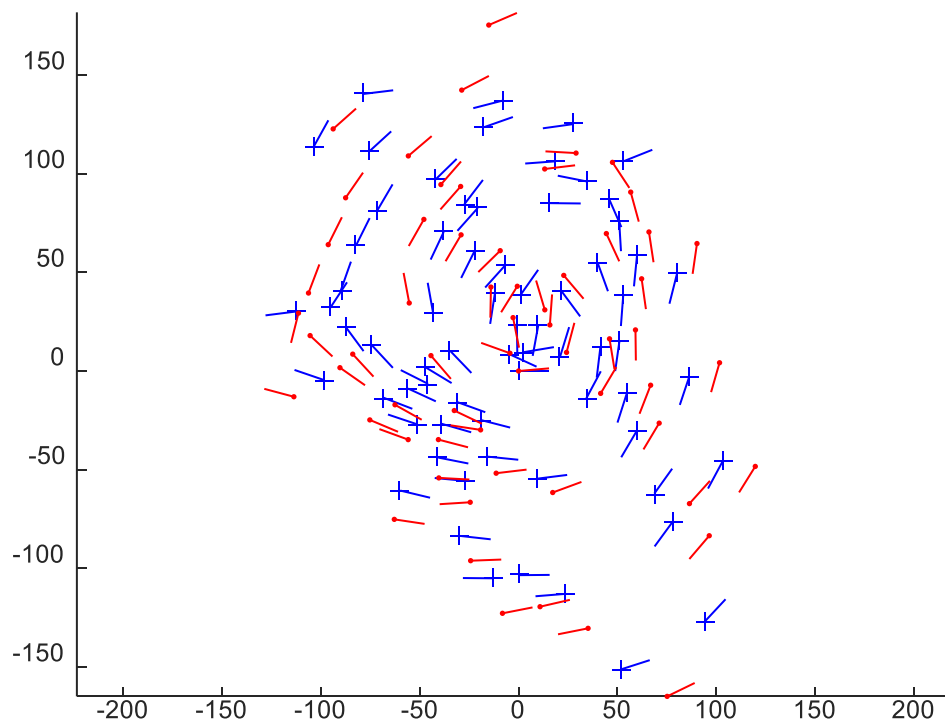

Similarity measure : 0.00317

SM = 0.86317, It's a MATCH

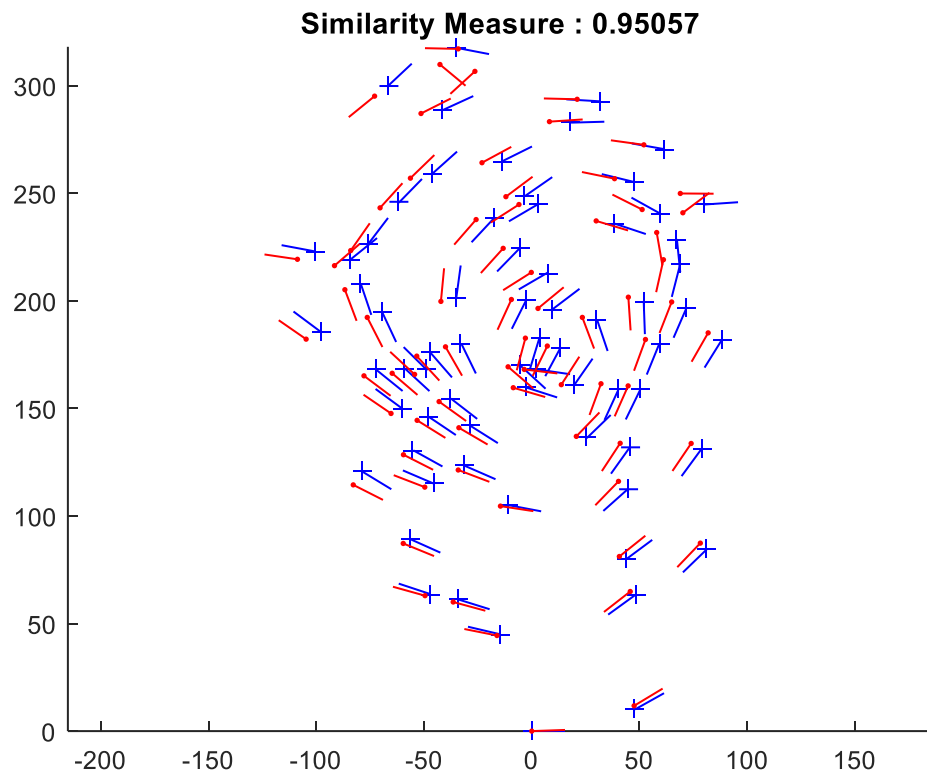

5. testlm vs testlmrot

Similarity Measure : 0.70904

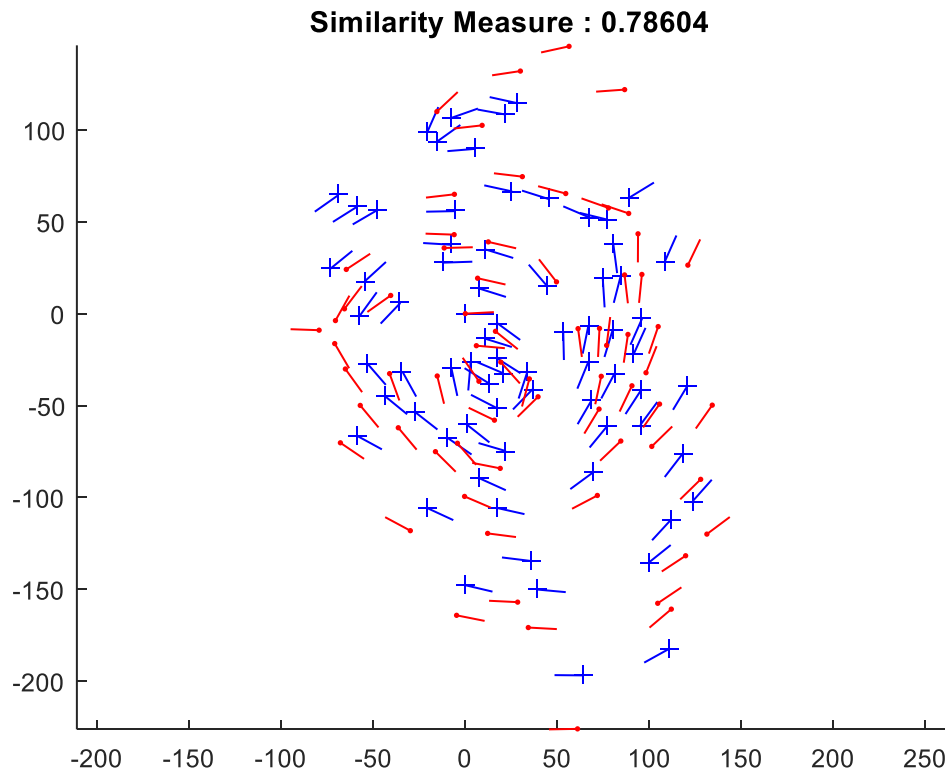

It's a MATCH

6. testlm vs testlmSP

It's a MATCH

7. testlmflip vs testlmfliprot

It's a MATCH

8. testImflip vs testImfliprotSP

Similarity Measure : 0.74655

It's a MATCH

9. testImflip vs testImflipSP

Similarity Measure : 0.48286

It's a MATCH

10. testlmflip vs testlmrot

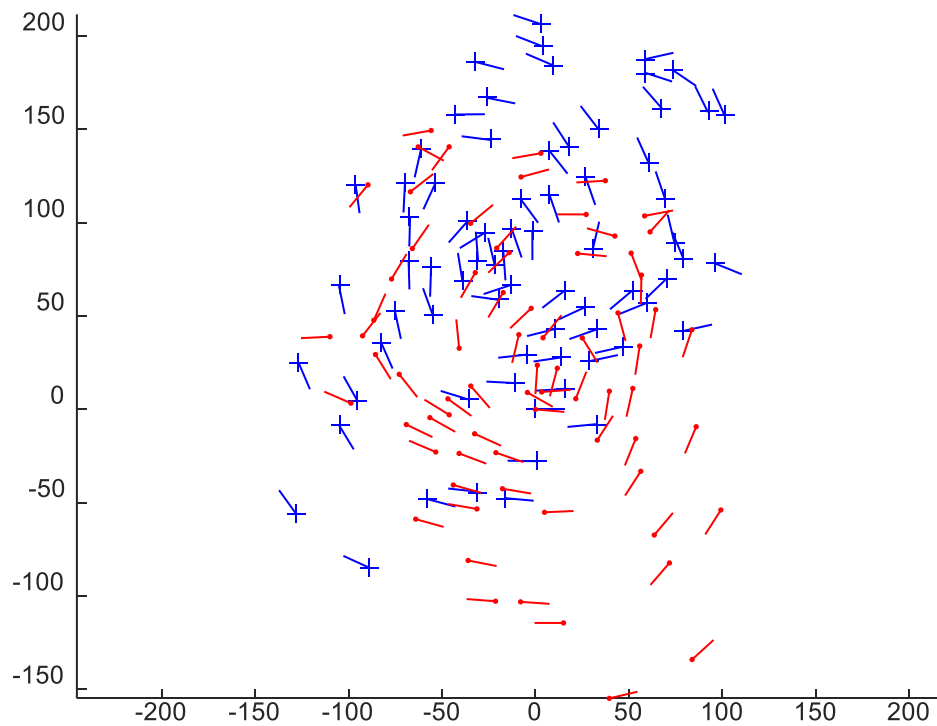

Similarity measure : 0.49795

SM = 0.49795. It's a MATCH

11. testlmflip vs testlmSP

Similarity Measure : 0.40278

It's NOT A MATCH

12. testlmfliprot vs testlmfliprotSP

Similarity measure : 0.92763

SM = 0.92763. It's a MATCH

13. testlmfliprot vs testlmflipSP

Similarity Measure : 0.45028

It's NOT A MATCH

14. testlmfliprot vs testlmrot

similarity measure : 0.50017

SM = 0.38817, It's NOT A MATCH

15. testlmfliprot vs testlmSP

similarity measure : 0.48591

SM = 0.48591, It's a MATCH

16. testlmfliprotSP vs testlmflipSP

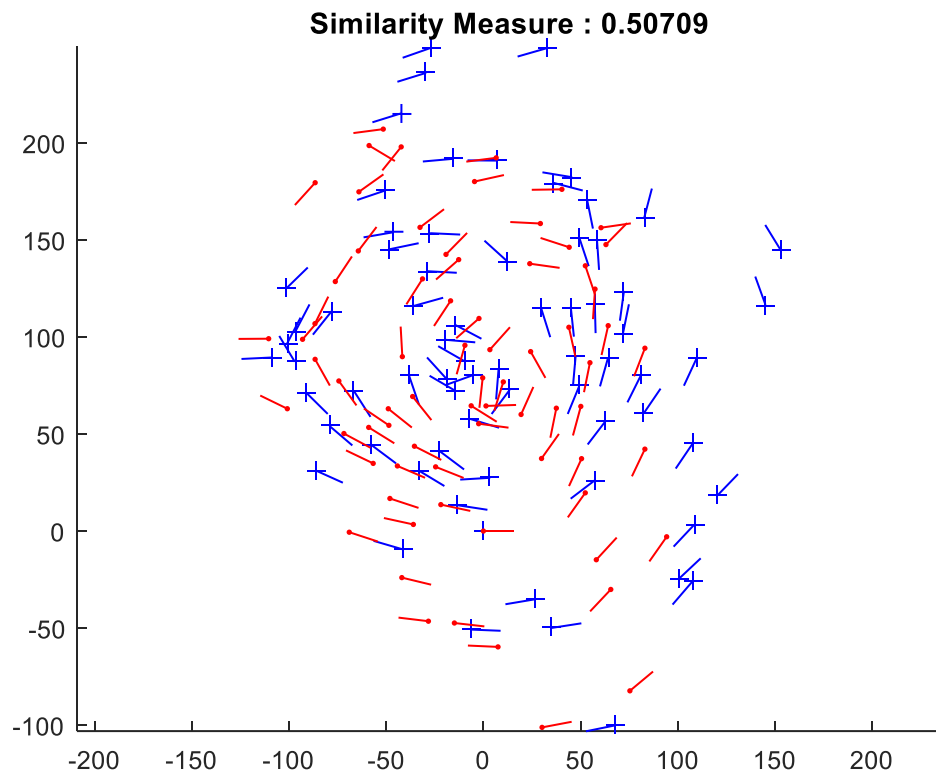

It's NOT A MATCH

17. testlmfliprotSP vs testlmrot

It's NOT A MATCH

18. testlmfliprotSP vs testlmSP

19. testlmflipSP vs testlmrot

20. testlmflipSP vs testlmSP

Similarity measure : 0.79973

SM = 0.79973. It's a MATCH

21. testlmrot vs testlmSP

Similarity Measure : 0.63375

It's a MATCH

Conclusion:

Except for the instances where two fingerprint images are exactly flipped with respect to each other, all other combinations come out to be a MATCH. That's because algorithm used here checks for the similarity between two images based on the position of minutiae as well as their orientation. Since in an exact flipped combination, both position and orientation are opposite with respect to the line about which the image is flipped, similarity measure has a very low value which results in NO MATCH. Considering the logic also, it can be seen that comparison between a fingerprint and its flipped image is not a MATCH, unless otherwise we observe the features and flip the image before importing it for the process.

We get 6 such flipped pairs in the test samples taken

1. testIm vs testImflip
2. testImflip vs testImSP
3. testImfliprot vs testImflipSP
4. testImfliprot vs testImrot
5. testImfliprotSP vs testImflipSP
6. testImfliprotSP vs testImrot

Thus the fingerprint matching process was carried out on the test samples given and It was found that the algorithm works really well for all the samples.
